SUMMARY

Thanh builds for real users: an automated fulfillment system for an e-commerce business, an online pharmacy whose assistant closes orders by itself, a bilingual medical-travel portal, a drawing school website, and a wedding game show played on guests' phones.

His way of working is disciplined vibe coding: AI writes most of the code, while Thanh owns the problem, the user flows, the task breakdown and the rules – and verifies everything with real data, tested on iPhone and Android the way a customer would use it, before calling it done.

SELECTED PROJECTS

ChicHub | <role – to fill> | Internal business platform | <to fill>

An automated fulfillment system for an e-commerce business

- One system for the whole chain: orders arrive, get mapped, go to print, get tracked and roll up into finance reports.
- Running daily in production for the ops team, fully replacing the old spreadsheet setup.

Nha Thuoc Benh Vien | Full-stack dev · UI/UX · Chatbot | Client project | 2026

An online pharmacy with a sales assistant that closes orders · nhathuocbenhvien.com.vn

- Rebuilt the whole site from the old data with custom scripts (crawl → assemble pages → categories, search, sitemap) and a refreshed UI modelled on major pharmacy chains.
- The site and the assistant are live at nhathuocbenhvien.com.vn.

Hospitals Tourism | Full-stack dev · UI/UX · Chatbot | Client project | 2026

A bilingual medical-travel portal with a patient-intake assistant · hospitalstourism.com

- Rebuilt the whole site on the structure of international medical-travel portals: hospital pages, a 6-step treatment journey, treatment packages, an article library, and consultation booking with an admin view.
- The bilingual site is live at hospitalstourism.com with 300 Vietnamese articles and 8 partner hospitals.

Hat Giong Chiem Tinh (AstroS) | Full-stack dev | Client project | 3 months

A Vietnamese birth-chart and astrology-reading website · hatgiongchiemtinhtinh.com

- Charts computed with Swiss Ephemeris; coordinates and time zone looked up automatically from the birthplace.
- Live at hatgiongchiemtinhtinh.com, working well on desktop and mobile.

oHa Star Desk | Full-stack dev · iOS | Tool for a school | <to fill>

A chart-reading tool for oHa astrology students, with a native iOS app · chiemtinhtinh.jst4.fun

- Every chart type students use: natal, synastry, composite, transits (general / personal / detailed) and yearly forecasts.
- The iOS app matches the web in 12/12 test cases – 772 values within 0.0001° – including births before 1906, when Vietnam still used local mean time.

Hong Xiem Art School | Developer (code only – UI designed by a partner) | Client project | since 04/2026

Website for a Hanoi drawing school with online classes · lophochongxiem.com

- Rebuilt the UI from measurements taken straight from the design file (type sizes, colours, positions), aligning text by actual glyph edges – never by eye.
- 22 pages live at lophochongxiem.com, on Cloudflare's free tier.

Bride vs Groom Showdown | Concept · UI/UX · Dev | A gift for a friend | <<to fill>>

A Kahoot-style game show for a close friend's private wedding – bride's side vs groom's side · marry.jst4.fun

- Guests open the site, enter a name and pick Team Bride or Team Groom; if time runs out, the system splits the teams evenly.
- Played live at the wedding.

vẽvời (Doodle Diary) | Concept · UI/UX · Dev · iOS | Personal project | 08/2026 – present

Thanh's drawing-practice notebook and personal gallery · vevoi.jst4.fun

- A session-based prompt generator: steps, a timer for each phase, and a self-check list.
- Used daily; 212 commits since 08/2026.

SKILLS

UI/UX: Mobile-first design, colour/type/spacing token systems, 44px touch targets, contrast checks, pixel-accurate builds from Canva/Figma designs, motion and scroll effects.

Front-end: HTML/CSS/JavaScript, TypeScript, React, Next.js, Tailwind CSS, shadcn/ui, Swift/SwiftUI (iOS).

Back-end & data: Next.js API routes, Python Flask, PHP, PostgreSQL, Prisma, SQLAlchemy, SQLite, Cloudflare D1, R2.

Infrastructure: Cloudflare Pages / Workers, Linux VPS, Nginx, Unicorn, PM2, cPanel.

Integrations & automation: Google Sheets / Drive APIs, Telegram bots, automated email parsing, print-supplier APIs, real-time Socket.IO.

AI: Guided chatbots with an LLM fallback for unusual questions (Gemini), voice transcription (Whisper), Claude Code orchestrating parallel agents, a shared rulebook across every project.

Testing: Playwright on emulated iPhone/Android, acceptance checklists measured like a real customer, automated test cases for bots.
